HOME IMPROVEMENTS**ENERGY SAVINGS**

The simplest way to save is turn off your lights when not in use. You can also change your light bulbs to energy saving ones; they are more expensive upfront, but in the long run you can save about 25% to 75% in energy costs. Another simple way to save money is to unplug electronics you rarely use. TVs and other stereo equipment still draw power when they are plugged in and off. If you want to explore further into cost saving items you can purchase a Electricity Usage Monitor. By plugging in all your devices one by one, you can see how much power your electronics draw. Another way to find ways to save money on your utilities is by contacting your local utility company and see if they provide free energy audits for their customers' homes. www.energy.gov
